In calculus, the differential represents the principal part of the change in a function $y = f(x)$ with respect to changes in the independent variable. The differential dy is defined by $dy = f'(x) dx$, where $f'(x)$ is the derivative of f with respect to x , and dx is an additional real variable (so that dy is a function of x and dx). The notation is such that the equation

Riemannian Geometry is an expanded edition of a highly acclaimed and successful textbook (originally published in Portuguese) for first-year graduate students in mathematics and physics. The author's treatment goes very directly to the basic language of Riemannian geometry and immediately presents some of its most fundamental theorems.

In this section we will start looking at limits at infinity, i.e. limits in which the variable gets very large in either the positive or negative sense. We will concentrate on polynomials and rational expressions in this section. We'll also take a brief look at horizontal asymptotes.
