Ventilation is the intentional introduction of ambient air into a space and is mainly used to control indoor air quality by diluting and displacing indoor pollutants; it can also be used for purposes of thermal comfort or dehumidification. The correct introduction of ambient air will help to achieve desired indoor comfort levels although the measure of an ideal comfort level varies from ...

Ventilation (architecture) - Wikipedia

Also critical to assess is the rigour that was applied in designing the project/programme, as this is a predictor of the extent to which the intervention has a strong foundation and will remain relevant over the course of its implementation. ... and/or from the latest standards update document 2012 and where useful the DAC/Donor definitions ...

Where does 0.7eV come from? Most manufacturers are still using an Arrhenius law (shouldn't we rather call it 'Erroneous law' ? ;-)) with an activation energy of 0.7eV to extrapolate High T Operating Life test data to use conditions for every kind of electronic component (from complex ICs to simple passives).

where does activation energy of 0.7eV come from? - No MTBF

The Public Inspection page on FederalRegister.gov offers a preview of documents scheduled to appear in the next day's Federal Register issue. The Public Inspection page may also include documents scheduled for later issues, at the request of the issuing agency.

Reinforcement learning (RL) is an area of machine learning concerned with how software agents ought to take actions in an environment so as to maximize some notion of cumulative reward. The problem, due to its generality, is studied in many other disciplines, such as game theory, control theory, operations research, information theory, simulation-based optimization, multi-agent systems, swarm ...
