

developments in polymer characterisation pdf

Polymer is an interdisciplinary journal dedicated to publishing innovative and significant advances in Polymer Physics, Chemistry and Technology. We...

Polymer - Journal - Elsevier

Polymer Chemistry. The home for the most innovative and exciting polymer chemistry, with an emphasis on the synthesis and applications of polymers

Polymer Chemistry

The Geneva International Centre for Humanitarian Demining (GICHD) is an expert organisation working to reduce the impact of mines, cluster munitions and other explosive hazards in the world, in close partnership with states, the UN and other human security actors.

Final Report - GICHD - Characterisation of explosive weapons

The use of X-ray computed tomography (CT), exploiting both synchrotron and laboratory sources, has grown significantly over the last decade, driven primarily by improvements in spatial resolution, reduction in acquisition time and the increasing availability of laboratory X-ray CT systems.

X-ray computed tomography of polymer composites

Electrospinning is a process by which polymer nanofibers (with diameter lower than 100 nm and lengths up to kilometres) can be produced using an electrostatically driven jet of polymer solution (or polymer melt).

Polymer nanofibers assembled by electrospinning

ABSTRACT. Nanocomposites, a high performance material exhibit unusual property combinations and unique design possibilities. With an estimated annual growth rate of about 25% and fastest demand to be in engineering plastics and elastomers, their potential is so striking that they are useful in several areas ranging from packaging to biomedical applications.

Nanocomposites: synthesis, structure, properties and new

An organic light-emitting diode (OLED) is a light-emitting diode (LED) in which the emissive electroluminescent layer is a film of organic compound that emits light in response to an electric current. This organic layer is situated between two electrodes; typically, at least one of these electrodes is transparent. OLEDs are used to create digital displays in devices such as television screens ...

OLED - Wikipedia

Abstract: Environmental, economic, and safety challenges have provoked packaging scientists and producers to partially substitute petrochemical-based polymers with biodegradable ones. The general purpose of this review is to introduce polylactic acid (PLA), a compostable, biodegradable thermoplastic made from renewable sources.

PolyLactic Acid: Production, Applications, Nanocomposites

Polymeric Scaffolds in Tissue Engineering Application: A

Rheology (/ ˈr iː ˈeɪ ˈl ɪ ˈɔː ˈdʒiː /; from Greek ῥῆμα, "flow" and -λογία, -logia, "study of") is the study of the flow of matter, primarily in a liquid state, but also as "soft solids" or solids under conditions in which they respond with plastic flow rather than deforming elastically in response to an applied force. It is a branch of physics which deals with the deformation and ...

Rheology - Wikipedia

Grain boundaries are ubiquitous defects in metallic alloys governing a range of properties, such as tensile strength, fatigue resistance, fracture toughness, strain hardening, brittleness, conductivity, or corrosion.. Unlike bulk phases they are planar and require 5 parameters to be crystallographically characterized (disorientation, plane inclination).

Grain Boundary Segregation Engineering: Engineering
