Electricity is the set of physical phenomena associated with the presence and motion of matter that has a property of electric charge. In early days, electricity was considered as being not related to magnetism. Later on, many experimental results and the development of Maxwell's equations indicated that both electricity and magnetism are from a single phenomenon: electromagnetism.

The development of direct (cycloconverters) or indirect frequency inverters operating with natural switching due to the ability of synchronous machines to provide reactive power, has enabled the creation of high performance, reliable variable speed electric drives.. These drives are particularly competitive in relation to competitors' solutions for power ratings over one megawatt.
