In quantum statistics, Boseâ€Einstein statistics (or more colloquially Bâ€E statistics) is one of two possible ways in which a collection of non-interacting indistinguishable particles may occupy a set of available discrete energy states, at thermodynamic equilibrium. The aggregation of particles in the same state, which is a characteristic of particles obeying Boseâ€Einstein statistics ...

In many-body theory, the term Green's function (or Green function) is sometimes used interchangeably with correlation function, but refers specifically to correlators of field operators or creation and annihilation

operators.. The name comes from the Green's functions used to solve inhomogeneous differential equations, to which they are loosely related.
